

POST-PHASE 6 · PLATFORM ENHANCEMENTS ·

PLATFORM ENHANCEMENTS

REPORT

BJP Technologies (T) Limited — May 2026

Admin UI · Dynamic Content · CSP Security · GitHub Repository

Enhancements delivered after Phase 6 completion

Following the successful launch of the BJP Technologies website in Phase 6, a series of targeted enhancements were delivered to improve the admin experience, extend content management capabilities, resolve security issues, and professionalise the GitHub repository. These changes were delivered across three feature branches and five areas of improvement.

The most significant addition is the **Dynamic Content Management System** — a SiteSettings singleton model with 40+ editable fields and 11 dedicated admin sections that allow the client to update all website copy without developer involvement. Previously, content such as page headlines, counters, body text, and contact details were hardcoded in HTML templates.

Panel UI Overhaul

PLATFORM

The Django admin interface was significantly improved across three modules. The goal was to make the admin practical for day-to-day use — reducing clutter, adding direct action controls, and preventing accidental data entry errors.

2.1 Services Admin

ENHANCEMENTS

Improvement	Detail
Edit & Delete buttons	Action buttons rendered directly in each list row — no need to navigate into the record just to delete
Side-by-side fields	Name + tagline on row 1, order + active toggle on row 2 — mirrors how users think about the data
Slug hidden by default	Auto-generated slug moved into a collapsed 'Advanced' section — not editable in normal use
Icon field collapsed	Icon SVG class moved into its own collapsible section to reduce visual noise
Bulk actions	Activate and deactivate multiple services at once from the list view
Inline order editing	Order field editable directly in the list without opening each record

2.2 Industries Admin

All the same improvements applied to the Industries admin — Edit/Delete action buttons, side-by-side field layout, collapsed Advanced and Image sections, and bulk activate/deactivate actions. The admin now presents a consistent experience across both content modules.

Enhancements delivered after Phase 6 completion

2.3 Contact Enquiries Admin

Improvement	Detail
Client fields readonly	All submitted fields (name, email, phone, message etc.) are read-only — only the status can be changed
Auto-mark as Read	Opening any enquiry automatically changes its status from New → Read — no manual step required
Coloured status badges	New = red, Read = blue, Replied = green — status visible at a glance in the list view
Bulk status actions	Mark selected enquiries as Read, Unread, or Replied in one action
No Add button	The 'Add' button is removed — enquiries only come from the website contact form, never manually created
Open / Delete buttons	Quick action buttons in each list row for the two most common operations

Two critical issues were discovered and resolved in the Content Security Policy middleware after deployment. Both caused visible failures in production.

Issue	Root Cause	Fix Applied
Admin panel completely broken — search and pagination expressions designed new Async Actions (fewer calls requires unsafe eval)	Alpine.js static data expressions designed new Async Actions (fewer calls requires unsafe eval)	Added Content Security Policy
Font Awesome icons invisible across the entire site	Theme loads Font Awesome webfonts from https://theme.ravan.co.uk/CDN/Font-Awesome-6.0.0-styles.css	Added font-face rules to the new CSS

Both fixes were applied to apps/core/middleware.py. The final CSP policy correctly balances security enforcement with compatibility for all third-party assets used by the Luminos theme.

Bug Fix — Services Page

POST-PHASE 6 · PLATFORM ENHANCEMENTS ·

A 750px tall blank section was discovered on the Services list page. The **large-image-area-bg-service-page** div was a jarallax background image container with no visible content — it rendered as dead whitespace between the banner and the services list. The element was removed entirely.

File	Action	Impact
apps/services/templates/services/list.html	Removed large-image-area-bg-service-page div	Eliminated 750px of blank space between

Content Management System

ENHANCEMENTS

The largest enhancement in this cycle. Previously, all website copy — headlines, body paragraphs, counter values, CTA button labels, and contact details — was hardcoded directly in HTML templates. Any text change required a developer to edit code, commit, and deploy.

REPORT

This has been replaced with a **SiteSettings singleton model** — a single database row (always pk=1) containing every editable piece of website content. The object is passed to every template as **{{ company }}** via a context processor, making all fields available site-wide with no additional queries.

Component	Location	Purpose
SiteSettings model	apps/core/models.py	Singleton with 40+ fields. pk always = 1. get() method returns or creates the
Proxy models (×11)	apps/core/models.py	Each section (e.g. HeroSectionSettings) is a proxy of SiteSettings — same
Context processor	apps/core/context_processors.py	Injects company_info into every request — passes SiteSettings as {{ compa
Admin sections (×11)	apps/core/admin.py	Each proxy model has its own ModelAdmin with relevant fieldsets. changelis
Sidebar navigation	config/settings/base.py	Collapsible 'Site Settings' group with 11 sub-links in Unfold sidebar.

5.2 Admin CMS Sections

The 'Site Settings' sidebar group is collapsible — it expands when any section is active and collapses otherwise. All 11 sections write to the same database row:

Admin Section	Fields Editable
Company Identity	Name, tagline, email address, phone number
Address	Office address, postal address, domain name
Social Media	Facebook, Twitter, LinkedIn, YouTube URLs (conditional footer icons)
Hero Section	Home page banner headline, subtext, primary CTA label, secondary CTA label

Stats Counters	4 animated counter pairs on the home page (value + label each)
About Strip	Home page 'Who We Are' section headline and body paragraph
About Page	Banner headline, 4 counters, intro paragraph, 'What We Do' body, 'Our Approach' body
Services Page	Banner headline and subtext paragraph
Industries Page	Banner headline and subtext paragraph
Contact Page	Google Maps embed URL (change if office location moves)
Footer CTA	Call-to-action banner headline, body text, button label

5.3 Templates Up

POST-PHASE 6 · PLATFORM ENHANCEMENTS ·

Template	What Was Made Dynamic
main/home.html	Hero headline/subtext/CTAs, 4 stat counters, about strip headline + body, services grid (was hardcoded)
main/about.html	Banner headline, 4 counters, intro paragraph, 'What We Do' body, 'Our Approach' body, services grid
services/list.html	Banner headline and subtext
industries/list.html	Banner headline and subtext
contact/contact.html	Office address, phone, email, Google Maps embed URL
core/footer.html	Footer CTA headline, body, button text + full footer (services, industries, social links all from DB)

Bug fixed: The about page previously had a hardcoded grid of 6 service cards that duplicated the Service model data. This was replaced with a dynamic loop — it now stays in sync automatically when services are edited in admin.

REPORT

5.4 Database Migrations

BJP Technologies (T) Limited — May 2026

Migration	Contents
0002_add_site_settings	Initial SiteSettings singleton model — company identity and social media fields
0003_add_homepage_content_fields	14 fields for home page hero, stats counters, and about strip
0004_add_sitesettings_proxy_models	6 proxy models (Company Identity, Address, Social Media, Hero, Stats, About Strip)
0005_add_page_content_fields	24 fields for About, Services, Industries, Contact, Footer sections + 5 new proxy models

Repository Polish

Admin UI · Dynamic Content · CSP Security · GitHub Repository

Enhancements delivered after Phase 6 completion

The GitHub repository was brought to professional open-source standards. A developer joining the project cold can now understand the entire project, set it up locally, and contribute correctly — solely from the repository files.

File Added	Contents
README.md	CI/Python/Django/Black/Ruff badges, tech stack table, full local setup guide, environment variables ref
LICENSE	Proprietary copyright notice — BJP Technologies (T) Limited owns all rights. Prevents unauthorised use
SECURITY.md	Responsible disclosure process for vulnerability reports. Response timeline (48hr acknowledgement, 7
CONTRIBUTING.md	Branching workflow, commit message format (Conventional Commits), definition of done checklist, pull
CHANGELOG.md	Full project history from v0.1.0 (Phase 1 — Infrastructure) through v0.6.0 (Phase 6 — Polish & Launch
.github/PULL_REQUEST_TEMPLATE.md	Every PR auto-populates with type of change checkboxes, migration checklist, screenshots placeholder
.github/ISSUE_TEMPLATE/bug_report.md	Structured bug reports: description, reproduction steps, expected vs actual, environment table, possible
.github/ISSUE_TEMPLATE/feature_request.md	Structured feature requests: problem statement, proposed solution, alternatives, scope checkboxes, pr

BJP TECHNOLOGIES (T) LIMITED

File	Change Type	Summary
apps/core/models.py	Modified	SiteSettings + 11 proxy models added
apps/core/admin.py	Modified	11 proxy model admins, dashboard callbacks, enquiry badge
apps/core/context_processors.py	Modified	Returns SiteSettings object as 'company'
apps/core/middleware.py	Modified	CSP: added unsafe-eval, Luminos CDN, data: to font-src
apps/core/templates/core/footer.html	Modified	Footer CTA + all contact/social data dynamic
apps/core/migrations/0002–0005	Created	40+ new fields, 11 proxy models across 4 migrations
apps/main/views.py	Modified	AboutView passes services queryset to template
apps/main/templates/main/home.html	Modified	Hero, stats, about strip, services grid all dynamic
apps/main/templates/main/about.html	Modified	Banner, counters, all body texts, services grid dynamic
apps/services/templates/services/list.html	Modified	Banner dynamic + removed 750px dead div
apps/industries/templates/industries/list.html	Modified	Banner headline + subtext dynamic
apps/contact/templates/contact/contact.html	Modified	Address, phone, email, maps URL dynamic
apps/services/admin.py	Modified	Action buttons, side-by-side layout, bulk actions
apps/industries/admin.py	Modified	Same improvements as services admin
apps/contact/admin.py	Modified	Readonly fields, auto-read, badges, bulk actions
config/settings/base.py	Modified	Unfold nav: 11-item collapsible Site Settings group
README.md	Created	Full project documentation with badges
LICENSE	Created	Proprietary copyright notice
SECURITY.md	Created	Responsible disclosure process
CONTRIBUTING.md	Created	Developer onboarding and contribution guide
CHANGELOG.md	Created	Full project history v0.1.0–v0.6.0
.github/PULL_REQUEST_TEMPLATE.md	Created	Definition-of-done PR checklist
.github/ISSUE_TEMPLATE/bug_report.md	Created	Structured bug reporting
.github/ISSUE_TEMPLATE/feature_request.md	Created	Structured feature requests

Technical Decisions

→ Proxy models instead of separate tables for SiteSettings sections

All site settings belong in one row — splitting into separate models would require joins or multiple singleton patterns. Proxy models give each section its own admin URL and form while reading and writing the same database row. Zero query overhead.

→ collapsible: True on Site Settings nav group

Unfold's navigation template supports group.collapsible via Alpine.js x-data. The group auto-opens when any of its items is active and collapses otherwise. A one-line config change — no custom template override needed.

→ About page services grid replaced with dynamic loop (not just made editable)

The hardcoded grid was a silent bug — editing services in admin had no effect on the about page. A dynamic loop is always in sync. No new admin fields needed.

→ **Proprietary LICENSE** over MIT or GPL

This is a private corporate codebase. A proprietary notice explicitly reserves all rights to BJP Technologies (T) Limited and prevents any assumption of open-source permissions.

→ **SECURITY** and included despite private repo

The live site is public-facing. Any researcher finding a vulnerability in the live site needs a clear disclosure path. SECURITY.md is discovered automatically by GitHub and linked in the repo's Security tab.

ry

POST-PHASE 6 · PLATFORM ENHANCEMENTS

These post-Phase 6 enhancements complete the initial development cycle for the BJP Technologies (T) Limited website. The platform is now fully dynamic, professionally documented, and operationally self-sufficient for the client. Content updates, enquiry management, and service/industry administration all operate through the admin panel with no developer involvement required.

Area	Before	After
Website content	Hardcoded in HTML templates	40+ fields editable from admin panel
Admin navigation	Single 'Site Settings' page	11 collapsible per-section links
Services admin	Basic list + form	Action buttons, side-by-side layout, bulk actions
Contact enquiries	Standard editable admin	Readonly client data, auto-read, colour badges
CSP security	Admin broken, icons invisible	Alpine.js and Font Awesome fully working
Services page	750px blank dead space	Removed — clean layout
GitHub repo	No documentation files	README, LICENSE, SECURITY, CONTRIBUTING, CHANGE

BJP Technologies (T) Limited — bjptechnologies.co.tz

Secure Technology. Scalable Growth.
